Rakesh Patpalli

AI/ML Engineer | Building Production AI for Enterprise Software @ Brügmann | Python, ML, NLP, SQL | M.Eng. Data Analytics | Ex-Accenture

Emden, Lower Saxony, Germany

Summary

I build AI systems that survive contact with production — not just demos that work once in a notebook. Right now I'm completing my master's thesis at Brügmann Software GmbH, where I'm developing an AI-powered prototype for PatOrg — a patent management platform used by 400+ clients across Europe. The work spans NLP, machine learning, and the full pipeline from data preprocessing to deployment. Before moving to Germany, I spent 1.5 years as an Associate Software Developer at Accenture, building and maintaining enterprise applications with AWS, SQL, Oracle, and MySQL in an Agile environment. That experience taught me to write code that holds up in production — not just in a notebook. My foundation bridges software engineering and data science: a B.Tech from PES University with a Computer Science minor (Data Structures, DBMS, Algorithms), now topped with an M.Eng. in Business Intelligence & Data Analytics at Hochschule Emden/Leer, finishing in 2026. What I work with: • Languages & ML: Python, SQL, Machine Learning, NLP, Predictive Modeling • Data & Cloud: Tableau, Pandas, Scikit-learn, AWS, Git • Engineering: React, REST APIs, Agile/Scrum, Test Automation I'm looking for full-time AI/ML Engineer or Data Scientist roles across Germany, available from September 2026. Always open to connecting — feel free to reach out about AI, data, or opportunities.

Experience

Brügmann Software GmbH

AI/ML Engineer (Master's Thesis)

January 2026 - Present (7 months)

Germany

- Developing an AI-powered prototype for PatOrg, a patent-management platform serving 400+ enterprise clients across Europe, to demonstrate production feasibility to company stakeholders.

- Built the end-to-end ML workflow — data preprocessing, model training (scikit-learn, PyTorch/TensorFlow), and experiment tracking with MLflow
- Applied NLP techniques to automate patent-document analysis.
- Collaborating cross-functionally with the development team to integrate AI into existing enterprise architecture.

Accenture

Associate Software Developer

December 2021 - May 2023 (1 year 6 months)

Bengaluru

- Built, tested, and maintained enterprise software for [industry/client type] in Agile/Scrum teams, contributing to CI/CD release cycles
- Designed and optimized data management systems using Oracle SQL, MySQL, and RDBMS.
- Deployed and supported applications on AWS.

Fouress Engineering(India) Pvt Ltd

Project Intern

January 2021 - April 2021 (4 months)

Bengaluru

- Implemented Lean Manufacturing and Pull-system techniques for butterfly-valve production, reducing cycle time and operational costs.
- Analyzed production losses across Gas Isolation and Water Control divisions, improving defect rates and product quality.
- Streamlined workflows to cut waste and optimize resource use.

Education

University of Applied Sciences Emden/Leer

Master of Engineering - MEng, Business Intelligence and Data Analytics

· (September 2023 - September 2026)

PES University

Bachelor of Technology - BTech, Mechanical Engineering · (2017 - 2021)

PES University

Minors, Computer Science · (2019 - 2020)

Alva's College of Education

Pre-University, PCME · (2015 - 2017)

Joy Public School
10th · (2004 - 2015)
